WEB SCRAPING AND DATA EXTRACTION USING PYTHON

DATE: 3 JUNE 2019

CREATED BY:

ANIKET GAIKWAD

INTRODUCTION TO THE PROJECT:

AIM:

To extract data from a website, www.geeksforgeeks.com and store the extracted data into a .csv format file.

PROCEDURE EXECUTED:

1. The html code of the website, www.geeksforgeeks.com was accessed with the help of Inspect Element.
2. The connection or interaction with the website was established with the help of Python's Beautiful Soup library.
3. The required essential data was extracted with the help of the tags present in the html file.
4. This extracted data was stored in a .csv file.

CONCLUSION:

The required data was extracted from the website with the help a web browser and python features.
